Informatio Company Overview

Informatio was founded in 2006 with Managed Services for EMC Centera as our focus.

Years of experience managing, operating, monitoring and migrating EMC Centera and a growing customer base and demand have led to the introduction of new products and services.

DelayedDeletes for EMC Centera was launched in 2007 with patents pending in the United States and Europe. Replitect replaces DelayedDeletes and offers recoverability of deleted information.

Replitect provides flexible recovery possibilities at system or file level.

Only deleted information is backed up by using a replicated EMC Centera system or file based tape backups to recover from.

Informatio today delivers services in three areas:

- ▶ Managed Services
- ▶ System and Security Reviews
- ▶ Custom Services

ApplicationAudit for EMC Centera automates the data validation process ensuring that archived information is stored with a valid retention period and that no unexpected data deletions have occurred.

Development of similar services and products for other Content Addressed Storage Arrays is currently being considered. Please contact Informatio for more details.
